

Week 9: Mini Project - House Sales Data Analysis

Dataset Description

Columns: The dataset contains the following key columns:

- **Id:** Unique identifier for each property
- **MSSubClass:** The building class
- **MSZoning:** The zoning classification
- **LotFrontage, LotArea:** Dimensions of the property
- **Street, Alley, LotShape:** Property access and shape
- **YearBuilt, YearRemodAdd:** Construction dates
- **OverallQual, OverallCond:** Quality ratings
- **SalePrice:** Sale price of the property

If there is a missing value, it indicates that the facility is not available. For example, if the "Garage" field is missing, it means the house has no garage. This applies only to categorical columns. For numerical columns of the corresponding field, missing values should be replaced with 0.

Note: For analysis and model development, learners are required to use all available columns.
